1. Introduction

A data dictionary is a collection of metadata such as object name, data type, size, classification, and relationships with other data assets. It is used by data administrators, analysts, and engineers to understand and trust data assets. It helps in the creation of authentic, transparent, and consistent data throughout the organization.

In this data dictionary, following servers are chosen for documentation:
Hospital (MySQL)

For each server, definitions of tables (entities/collections), views, functions are listed in order. Detailed properties of data elements (data type, size, nullability, optionality, indexes, foreign keys, constraints) are organized in tabular format.

2. Server: Hospital (MySQL)

Version: 8.0.37

1 database is listed below.

2.1. Database: hospital_matricula

Database objects to be listed: 1 table

2.1.1. Tables

2.1.1.1. Table: tbc_ph_medicamentos

Entidad: Medicamentos
Jerarquía: Fuerte
Percepción: Catalogo
Aprobado: No

Fields

Pos	Name	Type	Not Null	Others
1	Id 🔑 Identificador único del medicamento.	int Auto Increment	✓	
2	Nombre Nombre comercial del medicamento.	varchar(150)	✓	
3	Nombre_Cientifico Nombre científico del medicamento.	varchar(150)	✓	
4	Nombre_Comun Nombre genérico o común del medicamento.	varchar(150)	✓	
5	Principio_Activo Sustancia responsable del efecto terapéutico.	varchar(150)	✓	
6	Concentracion Cantidad del principio activo.	varchar(100)	✓	

7	Forma_Farmaceutica Presentación física del medicamento.	varchar(100)	✓	
8	Via_Administracion Forma en que se administra el medicamento.	varchar(100)	✓	
9	Tipo_Medicamento Clasificación del medicamento.	enum	✓	
10	Fecha_Registro Fecha de registro.	datetime	✓	Default: CURRENT_TIMESTAMP
11	Fecha_Actualizacion Fecha de última actualización.	datetime		Default: CURRENT_TIMESTAMP
12	Estatus Estado del registro (activo/inactivo)	bit(1)	✓	Default: b'1'
